The collection of milkweed : loss is vital to the war effort. The boys and girls of Pendleton County can now effectively share in this program. It is simple. It is patriotic. It is IMPORTANT.

The school children of Pendleton County are hereby requested and urged to join the school children of America in helping save the lives of their fathers, brothers and neighbors by collecting milkweed pods.

By capturing the East Indies, the Japs cut off our supply of kapok, and we have been using up what kapok we had in the United States, so we are compelled to substitute milkweed floss in the making of life vests for our fighting men. government must have all the milkthurch of weed floss it can get, because our 25 armed services will continue to need our life jackets as never before. Remand 24th, ember there will be, no more kapok r was de- for our fighting men until after they he United and their allies have wrestled Java in an In- from the Japs.

PENDLETON COUNTY LOSES ANOTHER OF ITS OLDER CITIZENS

Mrs. Mary S. Keister Dies at Son's Home On South Fork

Pendleton county lost one of its oldest and most esteemed citizens when in the early morning hours of Friday, January 31, 1941, at the home of her son near Brandywine, Mrs. Mary S. Keister fell into a peaceful sleep from which she painlessly passed into eternity.

Mrs. Keister, wife of the late John D. Keister, who preceded her to the grave by nearly two years, was the daughter of Jacob and Susan Dyer Trumbo. She was born March 27, 1847, at Brandywine, and her long life of ninety-three years, ten months and four days was spent in the vicinity of her birth. She is survived by one daughter, Mrs. Emma Smith, of keyser; and two sons, W. D. Keister, of Huntington, and E. L. Keister, of brandywine. A daughter, Myra, and a son, Bowman, preceded her in death. Also surviving are grandchildren, Martha Keister, Jessie neister, Grace Smith, Mrs. Mary Lee Talbot and Estyl Smith.

For more than seventy-two years
Mis. Keister was the loving and attentive wife of the late John D. Keister. Their marrises

For more than seventy-two years

Mis. Keister was the loving and attentive wife of the late John D. Keister. Their marriage was unique not only for the great number of years it spanned, but also because both husband and wife were privileged to torge well past the ninetieth milestone on life's highway-both passing quietly and painlessly from this life at the beckon of the Death Angel. Mrs. Keister, who taught school in

her early life, was endowed with a

tine intellect and a splendid memory. She was especially fond of reading the Bible and few people have been more conscientious students of the Scriptures, or have derived soul-satisfying comfort from han aid this good woman. For more than fifty-five years Mrs. Keister has been a boyal member of the Christian Church. She has departed from this life but her influence still lives on. Her beautiful character is an inspiration to all who came in contact with her. In her long life she was permitted to see many transitions in the world about her but amid changes her steadfast faith in her

ADVENTURING OUT-OF-DOORS IN THE MOUNTAIN STATE

BY JACK PREBLE

No one, as far as I know, has ever been able to give the true definition of adventure. Some folks find adven-Some fellows ture in various ways. may find it in hunting deer, moose and bear. Others by discovering rare types of vitamins while many others tind it in explorations into the realms of the outlandish; in exploring and mapping caverns, in collecting little known animal life in out of the way places, in studying the numerous animal life that exists in creeks and streams or in engaging in raids and skirmishes in some exotic land with a swashbuckling military force.

Last we found our type of adventure when we met a group from the National Speleological society of Washington, D. C., at Cabins, West Virginia. We met there over the week-end to investigate, explore and map the little known Peacock Cave deep in the wild mountains of the Smoke Hole region of the Allegheny Mountains.

Starting out Saturday morning for Peacock Cave we drove for several miles until we reached the summit of a high mountain. Leaving the cars we proceeded on foot toward the cave. Our path led us over a high, snow-clad mountain and down into Redman's creek until we came to Redman's Gap. Here we found we would have to cross the South Branch of the Potomac river. And we found, to our disgust, that the ice on the river was not strong enough to bear our weight. George Dare and Bill Stephenson finally located a boat, which they hired, and by means of breaking the ice in the river, we crossed to the other side. Then began a climb in that 45 degree landscape where a

er back we found that the rats had clipped these cedar twigs down the mountain side, dragged them into the mouth of the cave until they had a sizeable bundle of food and then transported them from the entrance to their nests. As near as we can figure the rats live on cedar needles, berries and bark during the winter. very little cuttings of nuts were found. The rats either eat the meat and shell of the various nuts or else go without. That remains to be determined by further study.

In Peacock Cave we also found the little pipistrella bat and the larger, long-eared bat. "The Book" says that most bats migrate down state for the winter while the laggare 13main in the north in some hollow. or cave in a state of hibernation. cave the temperature remains 42 to 52 degrees all winter lon 3 r thermometer was broken before we reached Peacock Cave and we were unable to take the February 22 temperature. We know that the temperature was below freezing in one spot where we found bats hanging upside down from the ceiling and ice stalamites on the floor of the cave. Most of these bats were covered with larvae or parasites working in the cold on their sleeping host.

We also found a curious type of fly in the cave but were unable to induce it to enter the alcehol bottle. Very few cave crickets were found and no salamanders as Peacock Cave is a "dead" cave. By dead cave we mean a cave that has no living formations or stalactites in the process of being formed. We did find one large room that looked to me like the Garden of the Gods in Colorado with grotesque twisted will a colorado with grotesque

ture when we met a group from the National Speleological society Washington, D. C., at Cabins, West Virginia. We met there over the week-end to investigate, explore and map the little known Peacock Cave deep in the wild mountains of the Smoke Hole region of the Allegheny Mountains.

Starting out Saturday morning for Peacock Cave we drove for several miles until we reached the summit of a high mountain. Leaving the cars we proceeded on foot toward the cave. Our path led us over a high, snow-clad mountain and down into Redman's creek until we came to Redman's Gap. Here we found we would have to cross the South Branch of the Potomac river. And we found, to our disgust, that the ice on the river was not strong enough to bear our weight. George Dare and Bill Stephenson finally located a boat, which they hired, and by means of breaking the ice in the river, we crossed to the other side. Then began a climb in that 45 degree landscape where a fellow could taste the dirt on the ground without bending over. It was a tough grind climbing up that mountain side for 1,200 feet through loose rock and rubble that had fallen from the cliffs that surmounted the mountain top.

Finally we reached the entrance of the little known Peacock Cave. found it to be an "A" shaped opening at the base of a high cliff and evidently the exit of a small river a few million years ago. Loading ourselves down with cameras, flashlights and carbide lamps; ropes and rope ladders and a collection bag for snails, bats, salamanders and cave crikets, we entered. For the first 80 or 90 feet we had to crawl on our stomachs. Then we found we could crouch or halfstand in the interior of the avern.

We started from the entrance of this unexplored cavern to map and picture its many ramifications and numerous passages. We progressed mome 600 feet until we had to corka rew upward to an upper level, about s and sons, 20 feet above the opening we had iting in the phoen following. Then, strange on it

main in the north in some hollow or cave in a state of hibernation. cave the temperature remains 42 to 52 degrees all winter lon thermometer was broken before we reached Peacock Cave and we wers unable to take the February 22 temperature. Most of these bats were covered with larvae or parasites working in the cold on their sleeping host.

We also found a curious type of fly in the cave but were unable to induce it to enter the alcehol bottle. Very few cave crickets were found and no salamanders as Peacock Cave is a 'dead" cave. By dead cave we mean a cave that has no living formations or stalactites in the process of being formed. We did find one large room that looked to me like the Garden of the Gods in Colorado with grotesque twisted pillars and columns and fallen and broken stalactites that rang like an iron anvil when struck. And we found about a bushel of cave pearly. Cave pearls are a rare formation being about the size of a hazelnut and covered with a pure coating of lustrous, pearly-like calcium.

Then there was the wall covered with a growth of stone, or calc formations that looked for all world like little mushrooms. And found gladiator's shields in stone elephant's ear, little pudgy Bhuddas and grinning heathen ... all formed by nature a tall years ago. We found the rare tite which is something like a ... tite except that it sometimes gro out like a barb at a 45 degree angle. We found a room of formations with helactites growing like the twisted roots of a large tree.

Some day a scientist or two will further explore this Peacock Cave and find things that will surprise them. All we can do is to tell them what said may be found in there that will bear further study. In my opinion, gathered after exploring same sighteen

The weather was perfect. The temperature hovering close to the 20 degrees, bright sun, clear as a crystal and very little snow on the eastern slope of the Alleghenies.

As for animal life in this Peacock Cave. We were treated to a grand surprise. We found in this cavern a type of animal that is given to few scientists to see or study. I refer to an animal called Nectoma Pennsylvanica, or the Allegheny wood rat. We discovered the pretty creatures in vast numbers in Peacock Cave. They are about the size of a grey

squirrel and close on to 16 inches; long. They have ears a trifle bigger than the repulsive European, or house The feet and belly of this rare animal are ivory white, then it shades upward into a sort of a dove gray and terminates in the back into a fawn colored tan or light brown. The fur is sleek and neat, something like a scal. The tail is not scaley like the common house rat but covered with short hairs. I never did like rats and could see nothing pretty in them. In fact I am afraid of any rat. I will pick up almost any kind of a poison-

ous snake with my bare hands . . . but
